

Influenza.
Don't get it.
Don't give it.

AVOID

FLU

DURING

PREGNANCY

- Influenza can be highly dangerous for mothers and their unborn babies
- The influenza vaccine has been used for many years in pregnant women with no safety concerns
- Immunisation could save your baby's life

Get immunised.
It's FREE[†] for you.

Ask your Lead Maternity Carer for a brochure on how the influenza vaccine can help protect you and your baby.

[†] usually early March to 31 December each year.

AVOID FLU DURING PREGNANCY

Influenza.
Don't get it.
Don't give it.

Influenza can be very dangerous for pregnant mums and their unborn babies.

Danger to Mum

- Changes to your immunity means you are more vulnerable to influenza-related complications such as pneumonia
- You are nearly 5 times more likely to be admitted to hospital for influenza related problems*

Danger to Baby

Influenza during pregnancy increases the risks of:

- Premature birth
- Low birth weight
- Miscarriage/stillbirth
- Birth defects

Get immunised. It's FREE[†] for you.

The influenza vaccine has been used for many years in pregnant women with no safety concerns.

Ask your Lead Maternity Carer for a brochure on how the influenza vaccine can help protect you and your baby.
